

ACHIEVE A YOUNGER, BRIGHTER SKIN GLOW

Glutathione is the body's "super hero" when it comes to anti aging. It's considered a vital antioxidant that protects cells from disease, while making your skin look brighter and more youthful at the same time.

A poor diet, pollution, toxins, medications, stress, trauma, aging, infections, and radiation all deplete the body's glutathione levels, making you susceptible to chronic infections and cancers as you age.

Glutathione recycles antioxidants in the body, playing a vital role in the detoxification process. This regenerative antioxidant is so powerful that it detoxifies the liver, protecting you from dangerous diseases such as Alzheimer's, cancer, and heart disease. Most people see immediate benefits on the skin, often times even lightening or whitening the skin complexion to a more desirable skin tone.

One of the best ways to obtain glutathione in your body is intravenously. Vitamins such as Vitamin B, B6, B12, folic acid, and Vitamin C are vital for the body's ability to produce glutathione. Nutrient IV therapy provides a fast and effective way to absorb these nutrients in your body.

While a healthy diet and lifestyle can help to slow the body's decline, supplementing these with regular glutathione IV treatments can help stimulate the body to produce more and thus maintain health and slow down the aging process.

GLUTATHIONE

**See this master antioxidant
make your skin dazzle.**

This high-impact drip encourages cell revitalization and regeneration, while you drastically improve the way your skin looks and feels. Achieve a lighter skin shade and look brighter, more youthful.

IMMEDIATE BENEFITS

- ✓ Look and feel younger by keeping your cells healthy and strong
- ✓ Detoxify the liver and cells, so you're protected against diseases
- ✓ Encourage cell revitalization and regeneration to slow down the aging process
- ✓ Improve skin complexion over a series of glutathione drips by minimizing melatonin
